

Practice Sheet – Arithmetic & Assignment Operators (Python) – 15 Questions

1. Ask the user to enter two numbers and print their sum.

Input: 5, 3

Output: Sum = 8

2. Ask the user to enter two numbers and print their difference.

Input: 10, 4

Output: Difference = 6

3. Ask the user to enter a number and increase it by 5 using assignment operator.

Input: 7

Output: Result = 12

4. Ask the user to enter a number and multiply it by 3 using assignment operator.

Input: 4

Output: Result = 12

5. Ask the user to enter two numbers and print their product.

Input: 6, 7

Output: Product = 42

6. Ask the user to enter a number and divide it by 2 using assignment operator.

Input: 10

Output: Result = 5.0

7. Ask the user to enter two numbers and print the remainder.

Input: 9, 4

Output: Remainder = 1

8. Ask the user to enter a number and apply modulus assignment operator with 2.

Input: 7

Output: Result = 1

9. Ask the user to enter two numbers and print floor division.

Input: 9, 2

Output: Floor Division = 4

10. Ask the user to enter a number and apply exponentiation assignment operator with 2.

Input: 3

Output: Result = 9

11. Ask the user to enter a number and print its square.

Input: 5

Output: Square = 25

12. Ask the user to enter a number and decrease it by 3 using assignment operator.

Input: 8

Output: Result = 5

13. Ask the user to enter two numbers and print their division.

Input: 8, 2

Output: Division = 4.0

14. Ask the user to enter a number and apply floor division assignment with 2.

Input: 9

Output: Result = 4

15. Ask the user to enter two numbers and print all operations (sum, difference, product, division).

Input: 6, 2

Output:

Sum = 8

Difference = 4

Product = 12

Division = 3.0
