

Practice Sheet – Functions (Intermediate Level)

1. Write a function to check if a number is prime or not.

Input: 7
Output: Prime

2. Write a function to return sum of all numbers from 1 to n.

Input: 5
Output: 15

3. Write a function to count vowels in a string.

Input: python
Output: 1

4. Write a function to print Fibonacci series up to n terms.

Input: 6
Output: 0 1 1 2 3 5

5. Write a function to find second largest element in a list.

Input: [10, 20, 4, 45, 99]
Output: 45

6. Write a function to remove duplicate elements from a list.

Input: [1, 2, 2, 3, 4, 4]
Output: [1, 2, 3, 4]

7. Write a function to check whether a number is Armstrong or not.

Input: 153
Output: Armstrong

8. Write a function to count frequency of each character in a string.

Input: hello
Output:
h = 1
e = 1
l = 2
o = 1

9. Write a function to find common elements between two lists.

Input: [1,2,3,4], [3,4,5,6]

Output: [3,4]

10. Write a function to sort a list without using built-in sort().

Input: [5,2,8,1]

Output: [1,2,5,8]
