

Practice Sheet – Arithmetic Operators (Python)

1. Ask the user to enter two numbers and print their sum.

Input: 5, 3

Output: Sum = 8

2. Ask the user to enter two numbers and print their difference.

Input: 10, 4

Output: Difference = 6

3. Ask the user to enter two numbers and print their product.

Input: 6, 7

Output: Product = 42

4. Ask the user to enter two numbers and print their division.

Input: 8, 2

Output: Division = 4.0

5. Ask the user to enter two numbers and print the remainder.

Input: 9, 4

Output: Remainder = 1

6. Ask the user to enter two numbers and print the result of exponentiation.

Input: 2, 3

Output: Result = 8

7. Ask the user to enter two numbers and print the floor division result.

Input: 9, 2

Output: Floor Division = 4

8. Ask the user to enter a number and print its square.

Input: 5

Output: Square = 25

9. Ask the user to enter a number and print its cube.

Input: 3

Output: Cube = 27

10. Ask the user to enter two numbers and print all operations (sum, difference, product, division).

Input: 6, 2

Output:

Sum = 8

Difference = 4

Product = 12

Division = 3.0
